

# Unpac<sup>®</sup> treats soil compaction

Penetrate compact soils with our *Simply Vital* biological.

By reducing water tension, water can enter the soil micropores more freely and naturally break up soil compaction. Unpac<sup>®</sup> can be applied with your existing irrigation system, which makes it easy to implement and reap the rewards.

**Available in Liquid Formulation**

## Featured Proprietary Formulation

Microbially-derived Glycolipid

## How Unpac<sup>®</sup> Works

### Penetrates Compact Soils

Distributes water more freely into soil micropores. Beneficial for all soil types.

### Reduces Water Tension

Allows water to move both vertically and laterally and spread over a larger area in the soil surrounding the plant.

### Biodegradable Biosurfactant

Naturally derived biosurfactant. Biodegradable formulation does not build up in soil.
